

Grasshancer FL

Grasshancer FL products are specially formulated to excel in interseeding and overseeding conditions. They can also be used for new seeding of short or medium term grassland. These Grasshancer products are fast germinating and have a quick establishment. That makes them compete well with the existing alfalfa or grass stand. The Grasshancer 200 and 300 series are based on DLF Festulolium-4n varieties; the best varieties to combine fast establishment, high yield and high feed value.

DLF Festulolium varieties used in the Grasshancer 200/300FL products have a significant advantage over straight ryegrasses. The influence of the fescue parent offers increased persistency and summer performance. In addition, the high NDFd trait of meadow fescue is carried into these DLF festulolium varieties. The result is higher animal performance per ton dry matter consumed compared to straight ryegrass, whether that is milk production or weight gain.

Grasshancer™ Fast Forage

Grasshancer 200FL

A short term grass mixture, based on DLF Festulolium varieties with a 2 year persistence, plus tetraploid Italian ryegrass. It's maturity makes it ideal for grasshancing alfalfa when having a late first cut as in a 3-cut system. The grass will be at its highest quality when alfalfa cutting gets underway.

Grasshancer 200FL is perfect when only one or two year extended production is desired from an alfalfa field or pasture, or when a short rotation overseeding program is implemented. Its rapid establishment and high production will boost the dry matter yield of thinned out fields.

Grasshancer DLF 200FL can also be used as new seeding for high producing, high forage quality, short rotation pasture or hay field.

 Also available in Frost Seeding Formula

Grasshancer 300FL

A medium term grass mixture, based on DLF Festulolium varieties with a 3 to 4 year persistency. Ideal for maintaining pastures and hay fields with high dry matter production and high feed quality. Its rapid establishment and high production will boost the dry matter yield of thinned out fields. Slightly earlier maturing than Grasshancer 200 makes it very suitable for grasshancing alfalfa in a 4-cut system. The grass will be at its highest quality when alfalfa cutting gets underway.

Grasshancer 300FL can also be used as new seeding for high producing, high forage quality medium rotation.

 Also available in Frost Seeding Formula

Frost Seeding Formula

Frost seeding is an excellent method to "Grasshance". It is quick, leaves no tracks or compaction from your equipment in the field and the seed is there when the conditions for germination finally arrive. That may be well before you are able to drive onto the field to use a drill or slit seeder to plant the seed and thus creating a significant head start. For clovers this has been the common and successful way of overseeding. The Frost Seeding Formula consists of PlatinumCoat® seed coating with fungicide on the grass seed and when added, PlatinumCoat® and inoculated red and white clover in the proper ratios to produce a balanced stand.

The PlatinumCoat® will improve the ballistic properties of the grass and clover seed, to allow for application with a fertilizer spreader. In addition, the coating will improve seed – soil contact, important when the seed is just dropped on top of the soil, adds vital nutrients for the seedling and water absorbing - slow release properties. The fungicide protects the seed and seedling during the prolonged period of germination and establishment.

The PlatinumCoat® on clover includes rhizobia bacteria, to guarantee a rapid inoculation of the seedling.

PlatinumCoat® improves the establishment success rate of frost seeding.

Frost Seeding Formula products can be used for regular seeding as well. Important is to use the proper seeding rate to account for the coating. Frost seeding is best done towards the end of winter.

Add Clover

Grasshancer 200FLC includes:

15% of coated (33%), inoculated Renegade red clover.

Add Clover

Grasshancer 300FLC includes:

11% of coated (33%), inoculated Renegade red clover.
4% of coated (33%), inoculated Jumbo white clover.

Clover

N-Hancer

N-Hancer is a 75/25 mix of red and white clover, PlatinumCoat® coated and inoculated for frost seeding.
