

Grasshancer® FL

Grasshancer® FL products are specially formulated to excel in interseeding and overseeding conditions.

They can also be used for new seeding of short or medium-term grassland. These Grasshancer® products are fast germinating and have a quick establishment. That makes them compete well with the existing alfalfa or grass stand. The Grasshancer® 200 and 300 series are based on DLF Festulolium-4n varieties: the best varieties to combine fast establishment, high yield and high feed value.

DLF Festulolium-4n varieties used in the Grasshancer® 200/300FL products have a significant advantage over straight ryegrasses. The influence of the fescue parent offers increased persistency and summer performance. In addition, the high NDFd trait of meadow fescue is carried into these DLF Festulolium-4n varieties. The result is higher animal performance per ton dry matter consumed compared to straight ryegrass, whether that is milk production or weight gain.

Grasshancer®

Fast Forage

Grasshancer® 200

Grasshancer® 200 is a mixture of top rated DLF diploid and tetraploid Italian ryegrass. Ideal for spring planting for one season grazing or cutting. Suitable for overseeding or open ground seeding. Very productive, high quality forage. DLF's Italian ryegrass has won the World Dairy Expo's Forage Super Bowl in last two years!

Grasshancer® 200FL

Grasshancer® 200FL is a short-term grass mixture, based on DLF Festulolium-4n varieties with a 2-year persistence, plus tetraploid Italian ryegrass. Its maturity makes it ideal for grasshancing alfalfa when having a late first cut as in a 3-cut system. The grass will be at its highest quality when alfalfa cutting gets underway.

Grasshancer® 200FL is perfect when only one- or two-year extended production is desired from an alfalfa field or pasture, or when a short rotation overseeding program is implemented. Its rapid establishment and high production will boost the dry matter yield of older and/or thinned out fields.

Grasshancer® 200FL can also be used as new seeding for high producing, high forage quality, short rotation pasture or hay field.

Grasshancer® 300FL

A medium-term grass mixture based on DLF Festulolium-4n varieties with a 3 to 4-year persistency. Ideal for maintaining pastures and hay fields with high dry matter production and high feed quality. Its rapid establishment and high production will boost the dry matter yield of thinned out fields. Slightly earlier maturing than Grasshancer® 200 makes it very suitable for grasshancing alfalfa in a 4-cut system. The grass will be at its highest quality when alfalfa cutting gets underway.

Grasshancer® 300FL can also be used as new seeding for high producing, high forage quality medium rotation.

Yield Enhancing Grasses

| Variety | Seeding Year | | Year 2 | Year 3 | Milk / Ton Potential |
|-------------------------------|--------------|--------|--------|--------|----------------------|
| | Spring | Fall | | | |
| Westerworld / Annual ryegrass | Strong | Strong | Strong | Strong | ** |
| Grasshancer 200/200FL | Strong | Strong | Strong | Strong | *** |
| Intermediate ryegrass | Strong | Strong | Strong | Strong | *** |
| Grasshancer 300FL | Strong | Strong | Strong | Strong | **** |
| Perennial Ryegrass | Strong | Strong | Strong | Strong | *** |
