

BERMUDAGRASS

FUTURA HEAT

BERMUDAGRASS

Futura Heat - Bermudagrass (*Cynodon dactylon*)

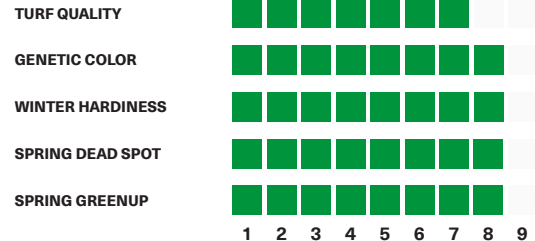

is a blend of improved seeded varieties that with its rapid germination and establishment rate, is an excellent choice for project managers on a tight completion schedule. With its increased turf density and fast establishment rate, Futura Heat bermudagrass blend should be the first choice for sports turf managers and coaches who wish to reduce player injuries, while also lowering maintenance costs and requirements.

Certified Futura Heat seed can be stored on the job site until needed for planting, whereas sprigs and sod must be ordered daily as needed. Seed can also be stored for regular use in repairing divots, worn spots, etc.

Under proper planting and growing conditions, a Futura Heat bermudagrass planted product can be opened for limited use several weeks to several months before a sprig planted Bermuda project. This earlier opening date is highly valued by project owners for early revenue generation on a new project. Newly sprigged or sodded Bermuda generally needs more frequent daily watering, for longer establishment period than Futura Heat seeded Bermuda, to establish well.

Futura Heat turf-type seeded Bermuda also requires less maintenance than most of the hybrid vegetative varieties, which must be de-thatched yearly and require special

(Rating: 1- 9, 1: Poor; 9: Excellent)
