

Technical Data

BENEFITS

- High Turf Quality
- Excellent Dollar Spot Resistance
- High Density
- Low Organic Matter Production

COBRA 2

CREeping BENTGRASS

Cobra 2 - Creeping Bentgrass (ISI AP-9) is a high dense growing variety with good resistance to major turfgrass diseases including Dollar Spot and Brown Patch. These traits, along with its attractive color and early spring greenup, produce superior fairways and greens for golf courses. Cobra 2 maintains its excellent performance even under high traffic conditions - an advantage appreciated by both players and greenskeepers. Cobra 2 is particularly well suited for improving, older greens and fairways by interseeding. It adds new genetics without having to change maintenance.

PLANTING & MAINTENANCE

SEEDING RATE1-3 LBS PER 1000FT²
 GERMINATION5-10 DAYS
 MOWING FREQUENCY.....3-7 TIME(S) PER WEEK
 NITROGEN REQUIRED.....LOW
 ENDOPHYTE ENHANCED.....NO

RATINGS

Poor-----Excellent
