

CREEPING BENTGRASS

Cobra 2

Cobra 2 - Creeping Bentgrass (ISI AP-9)

is a dense growing variety with good resistance to major turfgrass diseases including brown spot and dollar spot. These traits, along with its attractive color and early spring greenup, produce superior fairways and greens for golf courses. Cobra 2 maintains its excellent performance even under high traffic conditions - an advantage appreciated by both players and greenskeepers. Cobra 2 is particularly well suited for improving, older greens and fairways by interseeding. It adds new genetics without having to change maintenance.

Cobra 2 was developed exclusively for golf course greens, tees and fairways; croquet and tennis courts and bowling tops. Cobra 2 is also used as a minor component in winter overseed mixtures containing improved Poa Trivialis.

(Rating: 1- 9, 1: Poor; 9: Excellent)
