

TALL FESCUE

Mustang 4

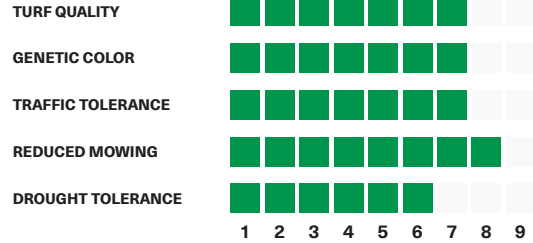

Mustang 4 - A-LIST Turf-type Tall Fescue

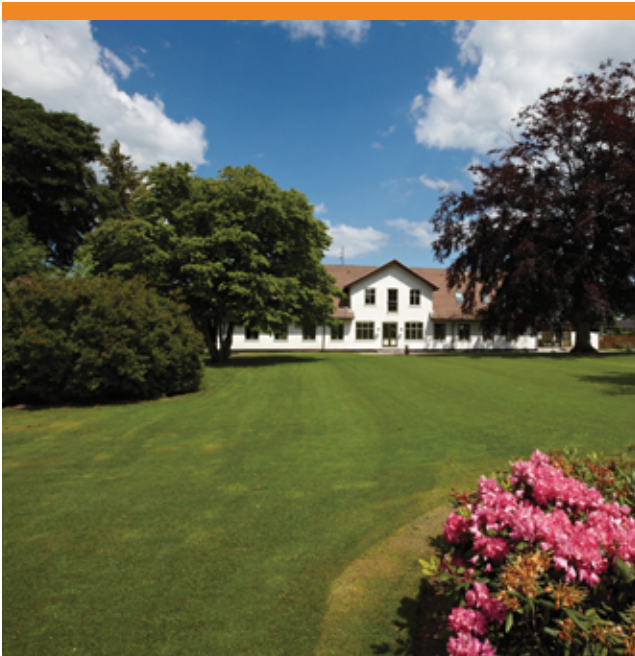

It is a very low growing variety with excellent performance in both quality and summer stress tolerance across the US. While many semi-dwarf tall fescues are more susceptible to Brown Patch., Mustang 4 is one of the top varieties for Brown Patch resistance. Additionally, it has very good resistance to Leaf Spot, Stem Rust, and Net Blotch Disease. Mustang 4 is the perfect choice for home lawns, parks, golf course roughs, and sports fields where the use of tall fescue is desired. High Drought tolerance and low input performance enabled it to be on the A-LIST.

It was the lowest growing tall fescue in 2007 to 2011 NTEP trials. It has exceptional turf quality, excellent seedling and mature plant salt tolerance, outstanding summer stress tolerance, and tolerates poor soil quality. In addition it has first rate shade tolerance, very good traffic tolerance, and is Endophyte enhanced.

(Rating: 1- 9, 1: Poor; 9: Excellent)
