

Technical Data

BENEFITS

- Fine Texture
- Cold tolerant
- High tiller density
- Excellent transition

QUICKSTON

ANNUAL RYEGRASS

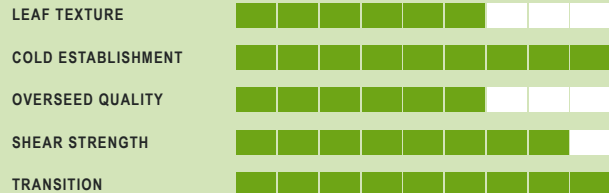

Quickston Annual Ryegrass (IS-TAR 11) is an improved turf-type annual ryegrass developed specifically for overseeding and seeding new areas where a temporary, attractive turf is desired. From six cycles of recurrent selection, improvements for color, tiller density and transitional ability are all Quickston enhancements that make other turf annual ryegrasses obsolete. Quickston is designed for winter overseeding dormant bermudagrass and it's perfect for golf courses, parks, sports venues and areas where quick cover is needed for temporary turf or soil stabilization. Winter overseeding extends use and aesthetics, and Quickston will naturally transition out in the spring, allowing the original turf to re-grow without being inhibited by persistent grasses that fail to transition.

PLANTING & MAINTENANCE

SEEDING RATE6-13 LBS PER 1000FT²
 GERMINATION4-7 DAYS
 MOWING FREQUENCY.....1 TIME PER WEEK
 NITROGEN REQUIRED.....MED
 ENDOPHYTE ENHANCED.....NO
