

PERENNIAL RYEGRASS

Stamina

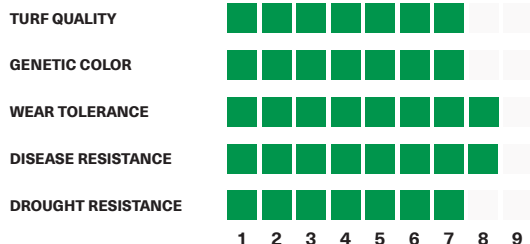

Stamina - (IS-PR 487)

is a very wear tolerant perennial ryegrass with excellent recovery from drought. Highly resistant to brown patch, Stamina will live up to its name as a quality turf in response to disease pressure and environmental stresses. Stamina is naturally endophyte enhanced, inherently repelling surface feeding insects and subsequent vulnerability to disease and stress.

Stamina is excellent for areas of high traffic where tolerance to wear and quick recovery are critical. Perfect for parks, sports/athletic fields and other high use venues as a straight or in blends and mixtures. Stamina is highly valued for overseeding dormant bermudagrass in the south and arid regions, extending turf usage.

(Rating: 1- 9, 1: Poor; 9: Excellent)
