

TRANSITIONAL RYEGRASS

Transist™ 2600

Transist™ 2600 - Transitional Ryegrass

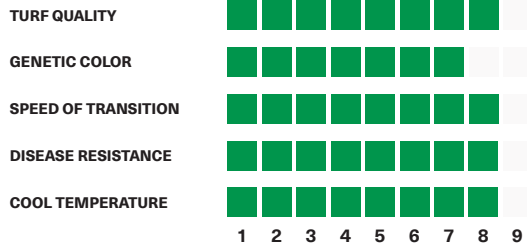

A successor of the original Transist™ Transist™ 2600 is an advanced type of transitional ryegrass giving you increased turf quality and performance.

Transist™ 2600 has been tested extensively in overseed turf trials alone or as an excellent blend partner with perennial ryegrasses such as in the very popular Futura 2500 blend. Alone, you can also use Transist™ 2600 as a short-lived nurse grass in the North and an overseeding grass in the south.

Transist™ 2600 is highly recommended for use in over seeding southern golf course fairways and roughs. Use it as a 20-40% component blended with perennial ryegrass such as in the Futura 2500 blend. It is also excellent for overseeding sports fields for quick repair at even cold times of the year. It can be used as a straight or blended with perennial ryegrass.

Transist™ 2600 germinates faster than perennial ryegrass, particularly in cooler conditions. Transist™ 2600 has been bred to disappear smoothly and quickly in the late spring as bermudagrass is ready to grow, for a smoother transition even without chemistry.

(Rating: 1- 9, 1: Poor; 9: Excellent)
