## Yukon

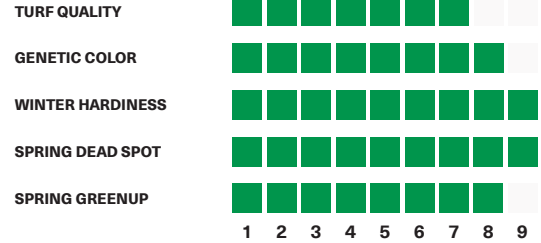

### Yukon - Seeded Bermudagrass

is the best choice for turf managers needing an exceptional seeded bermudagrass, no matter what bermuda growing zone they are in - worldwide!

Developed by the Oklahoma State University Turfgrass Research Team, in conjunction with the USGA, Yukon's five parental plants were selected in 1990 from a cold hardy study based on their high turf quality. Yukon continues to be a dramatic improvement in a seeded bermudagrass variety. Yukon uses up to 25% less water than other bermudagrasses, while maintaining superior turf quality. In multiple locations and over a decade of use Yukon continues to surpass all other seeded varieties and many of the vegetative varieties for Spring Dead Spot resistance, early spring green-up and winter survival.

Yukon has expanded the bermudagrass planting zone. It is the turfgrass professional's top choice for projects from the Equator through the transition zones of the world. In trials, it has shown excellent turf quality and winter hardiness at all mowing heights. Yukon can be seeded on new projects, as well as interseeded into existing turf of similar quality, with highest rating for turfgrass quality, color, density and texture. Additionally, with its excellent winter survival and cold tolerance, Yukon becomes a stand-alone choice for transition zone plantings. Yukon blends well with other turf-type bermudagrasses.

( Rating: 1- 9, 1: Poor; 9: Excellent )

#### NTEP 2016 DROUGHT STRESS

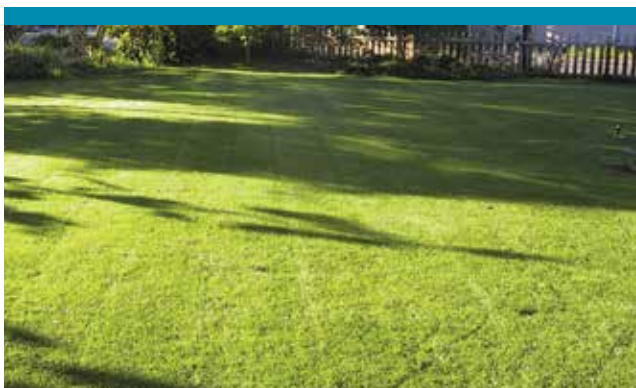

Yukon	6.0
