

TRAFFIC TOLER.

GRAZING TOLERANT

RAPID ESTABLISH.

ADAPTED TO CUTTING

HIGH YIELDS

**QUICK FACTS**

**TETRELITE-2** is an early flowering tetraploid (4N) short-lived perennial bunchgrass. This man-made cross of perennial and annual ryegrass is highly aggressive in terms of yield, vigor and regrowth. Tetrelite-2 produces a dense and erect sod and is responsive to increased nitrogen and rainfall. Tetrelite-2 exhibits excellent seedling vigor, tolerates moderately acidic soils and remains productive under poorly drained conditions. For excellent winter growth and persistence, Tetrelite-2 is a top contender.

**ADAPTATION**

GRAZING	EXCELLENT
HAY	EXCELLENT
SILAGE	EXCELLENT
GREEN CHOP	GOOD
OVERSEEDING	EXCELLENT
FROST SEEDING	GOOD

**TETRELITE-2** is best suited to rotational grazing, hay, silage and pasture utilization. Tetrelite-2 is not recommended for intensive (set stocking) grazing unless used as a component in blends and mixtures. Ideal for companion and nurse cropping or as an economical grass for overseeding/inter-seeding/frost seeding existing pastures.

# Tetrelite-2

Intermediate Ryegrass

- GOOD DIGESTIBILITY
- GOOD DISEASE RESISTANCE
- HIGH YIELD POTENTIAL
- GOOD WINTERHARDINESS
- WIDELY ADAPTABLE
